1 3. A method for providing a file, wherein is stored
2 information according to which said file is locally
3 stored when said file is received from a remote server,
4 said method comprising the following steps :

5 receiving a request for said file, said request
6 comprising said remote server identification,

7 checking that said file is locally stored,
8 forwarding said file to said remote server when
9 said file has been locally modified, and

10 deleting the information according to which
11 said file is locally stored.

1 4. The method according to claim 3 further comprising a
2 step for sending said information to said remote server
3 when said file has not been locally modified.

4 5. A server comprising means for carrying out the steps
5 of the method according to claim 1.

6 6. The server according to claim 5 comprising a
7 remotely logged client table for identifying where said
8 file has been forwarded.

9 7. A server comprising means for carrying out the steps
10 of the method according to claim 2.

11 8. The server according to claim 7 comprising a guest
1 client table for identifying to whom said file has been
2 forwarded.
